

Product Number: 52

Intumescent Fire Bags and Boxes

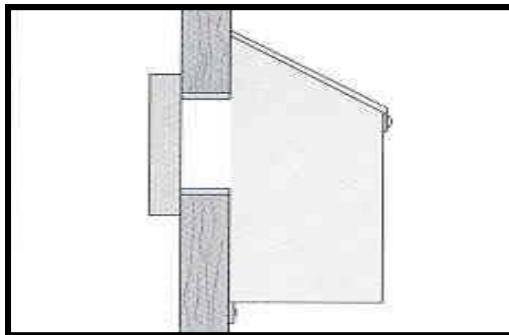

Description:

An internal metal firebox or flexible fire containment bag for use in areas with vulnerability to arson or vandalism attacks. The metal fire box fits on the back of the door or wall (chute/spout also available if required). The metal box is fitted with a hinged lid and lock as standard but a door is available as an optional extra. If combustible items are dropped into and ignited in the box they are extinguished by the intumescent material, which can be easily renewed. The flexible fire containment bag is for use where doors open tightly against walls and the doors need to be opened wide. Tested to BS476 Part 22

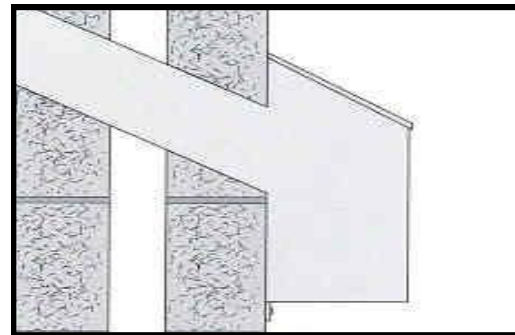

Metal Boxes:

Simply screw into position using 30mm screws

Standard Flush Fitting Fire Box

Fire Box with Entry Spout

Flexible Fire Bags:

The Flexible Fire Bag has an oversized letter box opening to go over existing internal openings or flaps. The pack is supplied with a small tube of Fire Proof Silicone, which can either be squeezed over the external plate or around the internal side of the door, around the letter box opening. Open the lid by turning the clips and separating the Velcro tape. There are two holes at either end of the metal plate, simply screw to the door with the screws supplied.

IMPORTANT:

Please ensure that the lid is sealed again every time after it has been opened
